

CABLE RACK INSULATOR PORCELAIN-UNDERGROUND 886WH

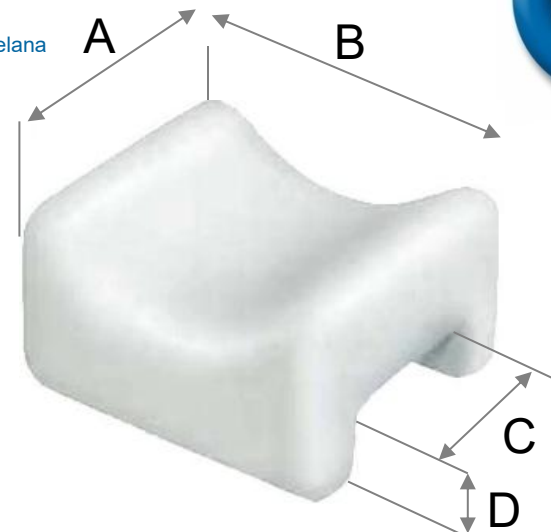

Aisladores para Camaras Subterraneas de Porcelana

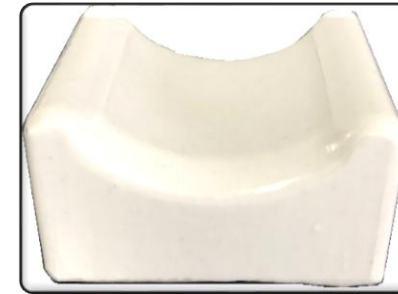

Submittal

Product Features

- Cable rack porcelain insulators with supporting hardware are commonly employed for cable mounting and guide support in manholes, cable trenches or sub stations.
- The cable rack system minimizes cable tilling, swaying or drooping. Akron Porcelain & Plastics Company (APP) offers one of the most comprehensive lines of cable rack insulators with over 50 different models available.
- The porcelain cable rack insulators are designed to rest on a cable rack and have no sharp edges or corners and are highly resistant to chipping or breakage.
- There is a variety of galvanized steel mounting hardware including channel back, drilled and slotted supporting up to 4 insulators. Full 360-degree cable support insulators (APP stock No. 1211) can also be provided with a cable support-mounting bracket.
- Dimension and sizing detail for the underground cable insulators and standard mounting hardware follow on subsequent pages. APP encourages your inquiry for special designs and requirements.
